

Section 1: What is Quote Approval?

A quote is a price estimate that a workshop gives to a customer before starting repairs. It lists all parts,labour and cost. A manager must approve it before work begins. Once approved,it is locked and cannot be changed.

Section 2: Database Tables

Table Name	Fields	Description
quotes	quote_id(primary key) quote_number(string,unique) customer_id(foreign key to POD 2 customers table) vehicle_id(foreign key to Pod vehicles table) status(enum:draft,pending,approved,rejected) total_amount(decimal,calculated) created_by(user_id) created_at(timestamp) approved_by(user_id,nullable) approved_at(timestamp,nullable)	Stores the main quote header. Links to customer and vehicle from Pod 2. Status starts as a draft. Total_amount is auto-calculated from line items.
quote_line_items	line_item_id(primary key) quote_id(foreign key to quotes table) description(string,part name or service) quantity(integer,minimum 1) unit_price(decimal) line_total(decimal,calculated)	Stores each item on a quote.line_total equals quantity multiplied by unit_price.The sum of all line_totals for a quote equals the quote total_amount.

Rorisang is responsible for database tables.

Section 3:API Endpoints

Method	Endpoint	What it does	Who can use it
POST	/api/quotes	Creates a new	Any workshop staff.

		quote with status set to draft.Requires customer_id and vehicle_id in the body.	
Get	/api/quotes:id	Returns one quote with all its line items.:id is the quote_id.	Any workshop staff.
Post	/api/quotes:id	Changes status to rejected. Requires rejection_reason in body. Quote can be edited again later	Only Managers

Rorisang is building these endpoints.I will update this table if he changes anything.

Section 4:UI Screens

Screen name	What it Shows	What the user can do
Create Quote	Form with customers dropdown,and a table for line items.Shows running total as items are added.	Select customer, select vehicle, add/remove line items, enter quantity and price, click Save to create draft quote.
Quote List	Table of all quotes with columns:Quote Number,Customers,Vehicle, Total,Status.Status has colored badges.	Click any quote to view details. Filter by status. Search by customer name.
Quote details	Full quote with all line items, totals, approval history. Shows who created it and when.	If draft: click Edit. If pending: manager sees Approve and Reject buttons. If approved: shows 'Locked' badge and Generate Invoice button.
Approval History	Log of all approval and rejection events with timestamps, user names, and reasons.	View only. No edits.

Neil is building these screens. I will add screenshots when he shares them.

Section 5:Approval Rules

1. Only users with the 'manager' role can approve or reject quotes.
2. Once a quote status is changed to 'approved,' it is permanently locked.
3. Locked quotes cannot be edited, deleted, or have line items added or removed.
4. If a quote is rejected, it returns to 'draft' status and can be edited again.

5. A rejected quote can be resubmitted for approval.
6. Only draft quotes can be deleted.
7. Approved quotes can only generate invoices, nothing else.

These rules are enforced in the backend by Rorisang. I will document any changes if the mentor updates them.

Section 6: Daily Progress Log

Date	Person	What they did	Status
2026/06/15	Siya	Introduction to quote approval explanation.	Complete
2026/06/16	BRUH B	Created Quote Approval Wiki structure. Set up Sections 6–9. Backfilled Day 1 tasks.	Complete
2026/06/16	Neil	Build Create Quote page UI. Added calculations. Screenshot taken.	Complete
2026/06/16	Rorisang	Built <code>Post/api/quotes</code> endpoint. Tested with Postman.	Complete
2026/06/17	BRUH B	Updated Daily Log for 17/06. Added Section 11 (Integration Points) and Section 12 (Screenshots). Send Pod 4 Status Report to Siya by 10 AM.	Complete
2026/06/17	Neil	Connected Create Quote to Rorisang's API. Built Quote List page with five quotes and status badges.	Complete
2026/06/17	Rorisang	Built <code>POST /api/quotes/:id/line-items</code> , <code>GET /api/quotes/:id</code> , and <code>GET /api/quotes</code> . Passed all Postman tests.	Complete
2026/06/18	BRUH B	Created Section 13 (API Contract) and Section 14 (Pod 6 Handoff Draft). Updated Integration Points with Siya. Added Bug Tracker (Section 15).	Complete
2026/06/18	Neil	Removed fake data. Connected real POST and line-items flow. Built Quote Detail page with status-based buttons.	Complete
2026/06/18	Rorisang	Built <code>POST /approve</code> and <code>/reject</code> endpoints. Added <code>checkQuoteLock()</code> to block PUT/DELETE if approved.	Complete
2026/06/19	BRUH B	Finalized Pod 6 Handoff document. Completed all wiki sections. Added Week 1 Summary and all screenshots. No placeholders.	Complete
2026/06/19	Neil	Fixed all Day 4 bugs. Polished UI. Added loading states. Mobile tested and fixed.	Complete
2026/06/19	Rorisang	Fixed review bugs. Added validation. Clean commit with no debug logs. Postman tests passed.	Complete

Section 7:Glossary

Term	Definition
Line item	One row in a quote showing a part or service name,quantity,unit price,and calculated total.
Locking rule	The rule that prevents any changes to a quote after it has been approved.
Approval event	The moment when a manager clicks Approve,changing the quote status and triggering the lock.
Subtotal	The sum of all line items totals before tax or discount is applied.
Grand total	The final amount the customer must pay including subtotal,tax,and any discounts.
Draft status	The quote is being created and can still be edited,saved or deleted.
Approved Status	The quote is locked. Work can begin. An invoice can be generated.
Rejected status	The quote was not approved. It returns to draft and can be edited.

I will add more terms as the team uses them.

Section 8:Tech Stack

Rorisang: REST API-Version-0.137.2, mySQL-Version-9.7.0.,json

Neil: VS CODE Version:1.124.2 Node.js:24.15.0

Section 9:Pod Dependencies

Waiting for final version

Section 10:Research Findings

 Research(POD 4).docx

Glossary

Foreign key	A field in one table that links to the primary key of another table.
-------------	--

Section 11:Integration Points

Pod 2

* Pod 4 receives authenticated user data from Pod 2.

* Uses user ID and role information for access control.

Pod 3

* Pod 4 consumes project/task data from Pod 3 through an API.

* Updates are synchronized automatically

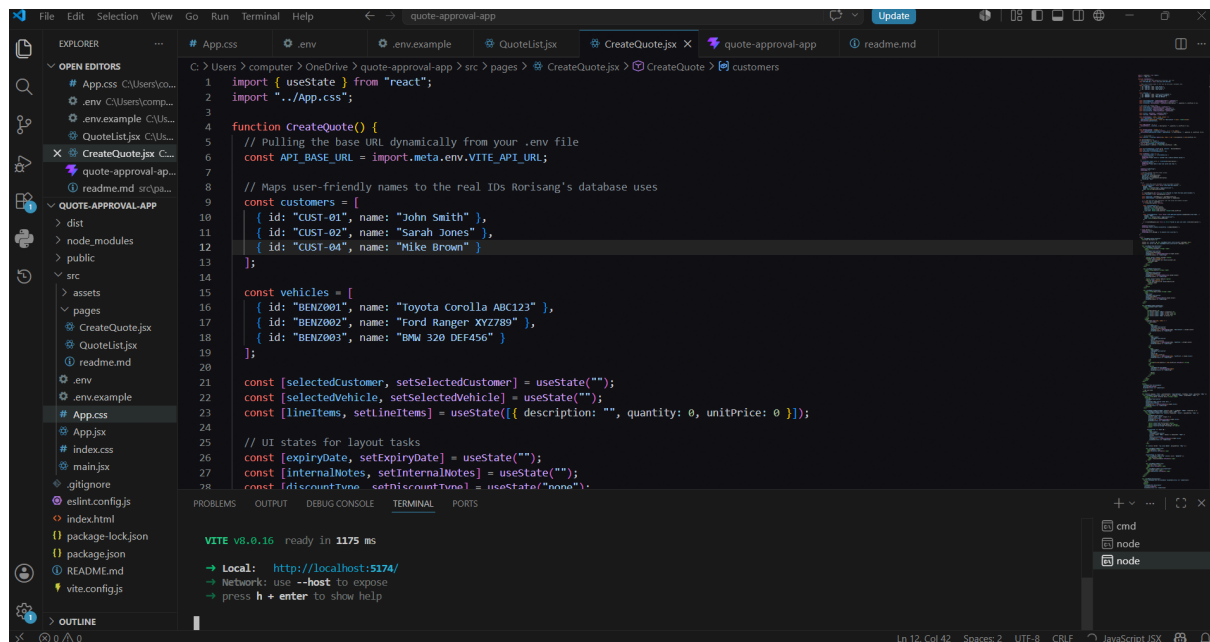

Pod 6

* Pod 4 sends completed actions, logs, and reports to Pod 6.

* Pod 6 handles notifications, analytics, or monitoring.
